## Care and Maintenance

It is good practice to distribute the weight evenly on each shelf. In order not to compromise the stability of the structure, we advise you to avoid leaning on them or using them as a support base for feet or to retrieve objects placed on top. Do not drag it and take care to hold it by the columns and never by the shelves whenever you decide to relocate it in other positions, using at least two or more people. Remember to use saucers which do not drip with moisture when placing plants on the shelves. Remove all objects on the shelves before carrying out the cleaning routine by wiping them thoroughly with a cloth dampened with warm water and bicarbonate of soda. For more stubborn dirt, use a soft cloth combined with cold water and a non-aggressive or abrasive detergent, which is not bleach, and test it first on a hidden surface for possible allergic reactions. We recommend that linear movements, both horizontal and vertical and never circular, are used when cleaning.

## Cura e Manutenzione

E' buona norma distribuire uniformemente il peso su ogni singola mensola. Per non compromettere la stabilità della struttura, consigliamo di evitare di appoggiarvi né tantomeno utilizzarli come base di appoggio per piedi o per recuperare oggetti situati in alto. Non trascinare ed avere cura di afferrarlo per le colonne e mai per le mensole ogniqualevolta si decida di ricollocarlo in altre posizioni, servendosi almeno di due o più persone. Ricordarsi di utilizzare sottovasi che non trasudino di umidità per la posa delle piante sopra le mensole. Prima di procedere alla pulizia ordinaria strofinando a fondo con un panno bagnato di acqua calda e bicarbonato, rimuovere tutti gli oggetti presenti sulle mensole. Per lo sporco più ostinato, utilizzare un panno morbido unito ad acqua fredda e un detersivo non aggressivo o abrasivo, che non sia candeggina, effettuando prima una prova su una superficie nascosta per testare eventuali reazioni allergiche. Suggeriamo di eseguire movimenti lineari, sia orizzontali che verticali e mai circolari, quando si eseguono le operazioni di pulizia.

## Entretien et Maintenance

Une bonne pratique consiste à répartir le poids de manière égale sur chaque étagère. Afin de ne pas compromettre la stabilité de la structure, nous vous conseillons d'éviter de vous appuyer dessus ou de les utiliser comme base d'appui pour les pieds ou pour récupérer des objets placés dessus. Ne le faites pas glisser et veillez à le tenir par les colonnes et jamais par les étagères lorsque vous décidez de le déplacer dans d'autres positions, en faisant appel à au moins deux personnes ou plus. N'oubliez pas d'utiliser des soucoupes qui ne dégouttent pas d'humidité lorsque vous placez les plantes sur les étagères. Retirez tous les objets présents sur les étagères avant d'effectuer le nettoyage de routine en les essuyant soigneusement avec un chiffon imbibé d'eau chaude et de bicarbonate de soude. Pour les salissures plus tenaces, utilisez un chiffon doux associé à de l'eau froide et à un détergent non agressif ou abrasif, qui n'est pas de l'eau de javel, et testez-le d'abord sur une surface cachée pour vérifier les éventuelles réactions allergiques. Nous recommandons d'utiliser des mouvements linéaires, tant horizontaux que verticaux, et jamais circulaires, lors du nettoyage.
